

An advanced cloud solution

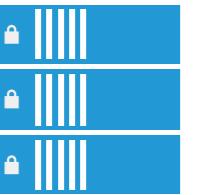

Keep important documents securely and share them with others. That's what SpotDog stands for. To achieve this, we built an advanced cloud-environment. On Dutch soil and independent of American companies. Be sure that what's yours, remains yours. Only you have the key. And that's such a safe idea.

3 data centers in the Netherlands

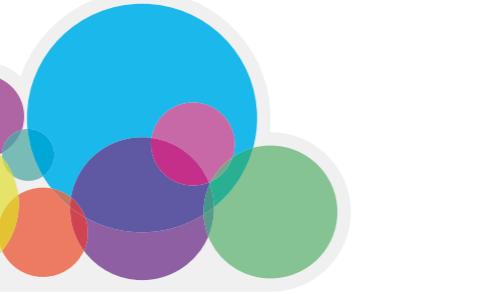

SpotDog offers its customers the safest environment in the field of cloud computing. The SpotDog Secure Cloud is an ingenious system from different servers.

The three data centers of SpotDog Secure Cloud are, for strategic reasons, spread across different regions in the Netherlands, even the height of the sea level was taken into account.

24/7 monitoring

Our servers are monitored 24/7. All servers are connected with one another by means of the SpotDog cloud technology and communicate very fast over the secure data lines to each other. The SpotDog datacenters meet the most stringent requirements about safety and are NEN 7510 certified.

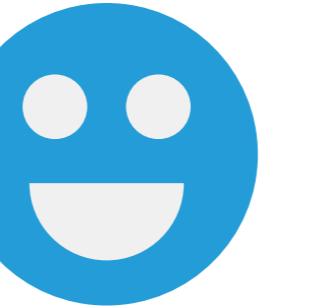

Data confetti

All the documents that you save in the SpotDog Secure Cloud are shredded into „data-confetti“. This means that every document is encrypted and is cut into small pieces. This data confetti is randomly stored on the three different data centers. Through this technology, there's never a complete document on an unique server. If someone already might look in the server, he will only see a whole bunch of data confetti wherein the connection between the data fragments is not present. And this is of course very safe.

Linking SpotDog with your existing workflow

SpotDog has an API on which existing systems can be linked easily. We would like to make an appointment to talk about the possibilities.

Take now a free trial

Does SpotDog LOCKER fit with you and your organization? Discover it without any obligation. Take a free trial and discover during one month all the possibilities for free. SpotDog LOCKER

Always inform your customers correctly, securely and transparently.

SpotDog LOCKER is the best tool to manage and exchange confidential documents and information securely online

Everything is self-explanatory

SpotDog LOCKER is easy to use. Your staff and your customers can start immediately

Up-to-date View

SpotDog LOCKER offers a complete and up-to-date digital file. Your staff and your customers have a real-time view.

Safe, Protected and familiar

SpotDog LOCKER meets the highest safety standards. Your documents are safely stored in Dutch data centers.

More notion with less money

Staff can communicate to each other through a secure mailbox and see at a glance whether there's a reaction on a document, note or message.

SpotDog LOCKER offers short lines, better communication and more transparency. Your organization can work faster and more efficiently and the quality of your services increase. At the same time you end a massive paperwork.

Request now for a free demonstration without any obligation!

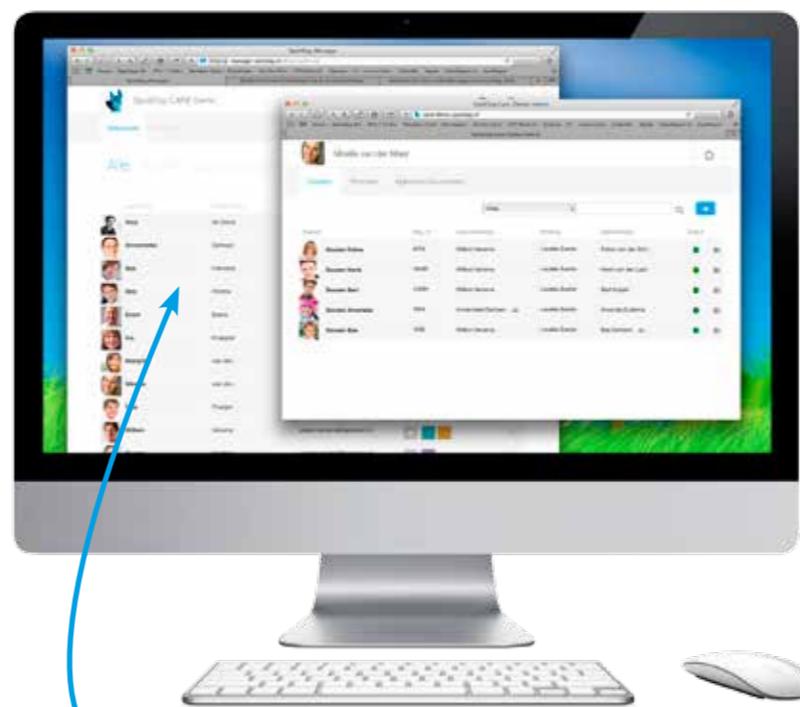

Share easily and quickly documents

All documents about your customers, until now scattered throughout the organization are clearly organized in SpotDog LOCKER.

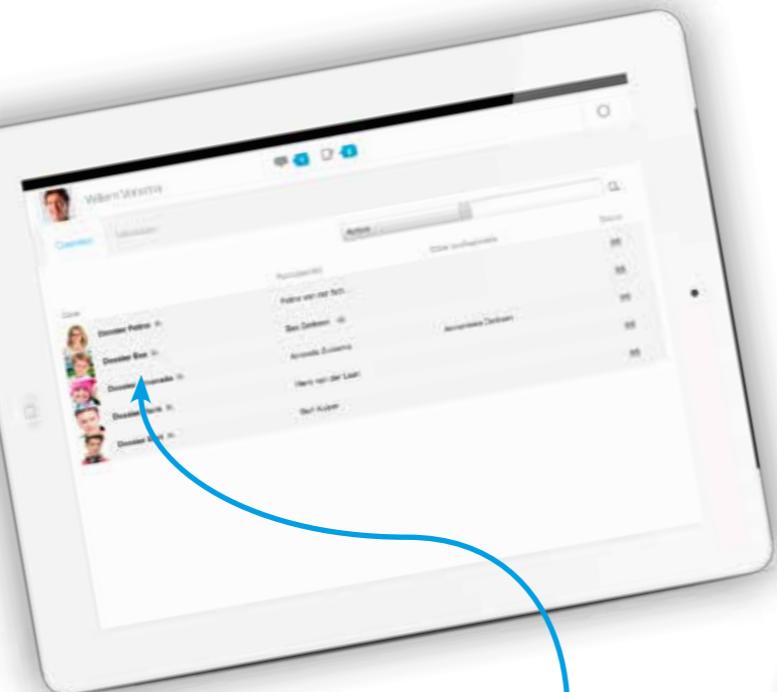

The documents that you want to make available, can instantly be added centrally. Besides staff and customers can (if desired) add themselves documents and notes with a few clicks.

Those documents are placed in an individual bookcase of customers. Your staff can decide the moment when customers can read documents. You do not need to print and send by mail anymore. It's not only a gain of time but also a lot of paper!

Easy to manage

Due to the comprehensive management module you connect name, department, staff and customers easily to each other. SpotDog LOCKER can also be connected to your current enterprise software. We offer for this customized solutions.

All customers at a glance

Your staff see all their customers at a glance, arranged alphabetically. From this central overview your staff has a direct insight into the current status of each file. They can read and send messages and view documents. Also your staff can immediately see on which documents customers made notes.

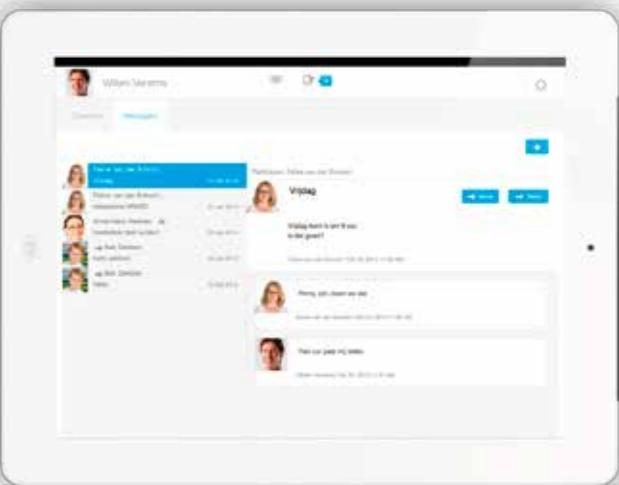

Communicate safely with each other

By using the message service in SpotDog LOCKER staff can simply and securely communicate with customers. Everything remains central in the system and there's no need to use the less reliable e-mail.

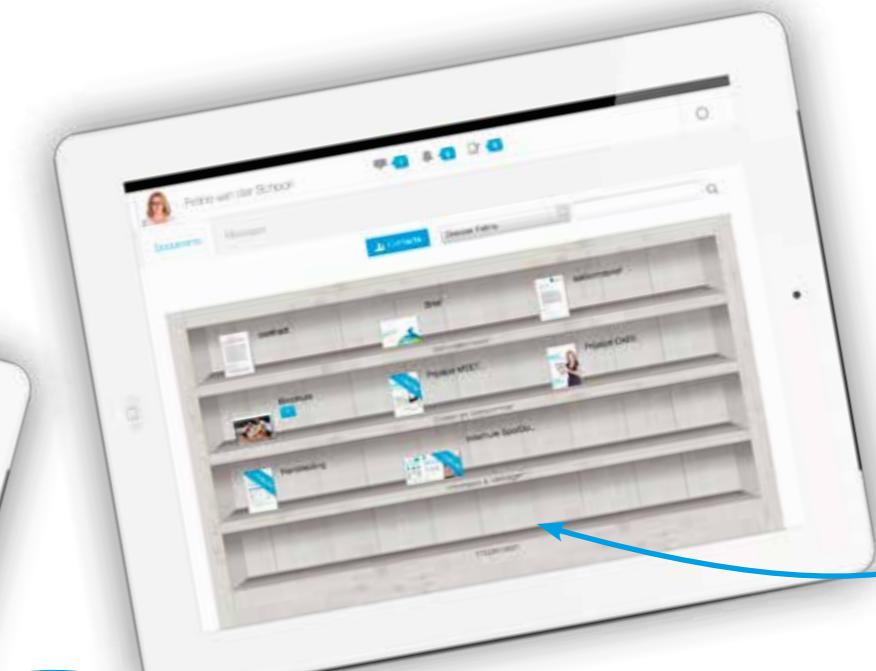

Privacy guaranteed

The messages are sent encrypted via a secure connection. The privacy of your customers is thus ensured.

Power over your own bookcase

Your customers dispose of their own organized bookcase. It contains all documents shared with him or her. Once a document is placed, the other receives a reminder of it.

Share notes

Your customers can view the documents in their bookcase and easily make notes. These notes are automatically shared with your staff.
